

# Box Card

---

## Instructions

Cut out all of the parts to make your card and fold along the perforated lines.

Take the front and back of your card and add tape or glue to the slim tab.

Attach to the back part of your card.

Attach the frame to the inside of your card using double sided tape or glue.

Starting with the largest piece, carefully insert your layers into the frame. These can be glued into place or if you would like some depth then use foam pads or glue gel.

To make the 3D sections fold along the perforated line then glue together along one side.

With each piece folded glue it onto the top of the previous piece until they are all glued together.

You should now have this effect.

Now glue to the corresponding section on your layers. Continue to do this for all of the 3D sections and decorate as desired.
