

Pop-out Cards Mini Kit

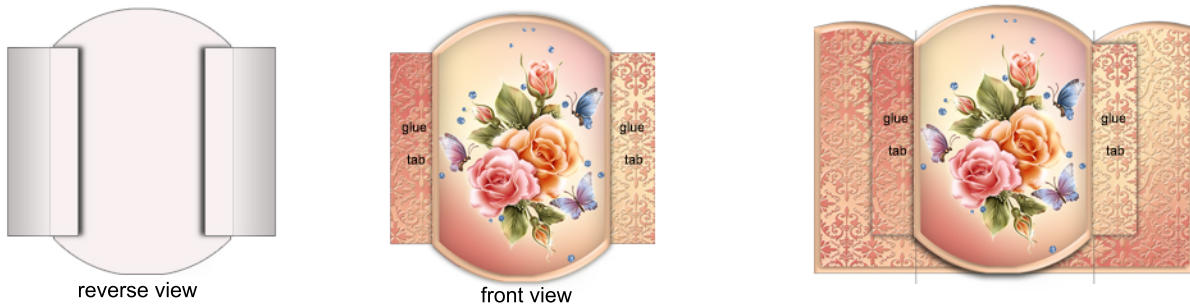

Instructions

designed by **Mary MacBean** exclusively for www.craftsuprint.com

Print the 2 sheets on to medium to heavy weight card or photo paper. Cut out all pieces

Score and fold the card back, front and popout along the printed lines in the directions shown (mountain fold towards you, valley fold away from you).

Fold the sides to the inside of the popout. Using double sided sticky tape or glue on the reverse of the glue tab only, attach the popout to the front of the card, ensuring that the centre panels align. Take care not to glue past the fold on the glue tab, or the popout will not work. A line of glue or DST on the outside edge of the tab is sufficient.

Using double sided sticky tape or glue, attach the two wings to the front, aligning the edges. These cover the glue tabs.

Please note, the side wings do not fold over the front of the card. The partly folded wings help the card to stand up.

Finish the card by attaching a greeting using either one of the included sentiments or the blank tag with your own message.
