

glue/tape the two thin strips together - this provides stability for the slider mechanism
Then attach part 2 to the inside of card matching up the slots.

Slide the slider strips thru the slot - attach to the front and then glue/tape the shaped piece over the strips

Now attach the bee to the end - covering the slider strip...you may need to trim a bit. Make sure you keep the bee inside the edge of card when closed.

Add all the other pieces to finish your card.
I did decide that the two ovals are not needed for layering - just attach the flowered oval with dimensionals making sure to clear the slider strips.
