

3D Slice Form Nested Tab Assembly

The 3D Single Lily Plant Slice Form Card uses the center slip assembly which locks the cross pieces in place. It is used for tall form assembly. The mechanism has one piece with a long center cut with the second piece being notched at both ends. The second piece is slipped into the notch which then allows the bottom to slice into place. Anchoring the piece so that it does not slip around is achieved through adding an element in the fold.
