

Print pdf of box (using actual size option in pdf print dialogue), suggest using around 160gsm card. Can cut by hand but so much easier using Scanncut ☺ - see below

- Using cutting mat and **Direct Cut** (b/w setting) scan design into Scanncut machine
- Using Scanncut touchscreen, crop scan to actual cutting area
- Press Cut

Fold along divisions (see above red dotted lines) and stick grey tabs

To use a ribbon or silver thread tie, punch holes in box rim and lid rim (see blue arrows above), also the top of tag, and thread chosen ribbon through (first the box rim then the lid rim) then tag before tying in bow or knot. If wish to hang from say twig tree can thread ribbon through punch holes made where red arrows are. (I normally just rest boxes on branches of a regular type tree)

Can also use say, point of nail scissors or pokey tool to create holes if don't have punch tool

For full Direct Cut process and construction of box see video - <https://youtu.be/5J3XKANUGWE>
