

# 180° V-Fold Arch Template

## Assembly Instructions

The Butterfly Pop-up Card is a great example of using two V-fold arches to create a dramatic pop-up mechanism. It is a simple 5 to 6 piece mechanism that slips into a folder. Fold on the dotted lines before assembling.

The following is a diagram explanation of the slot assembly of the pieces.

**Step 1** (optional) The Butterfly Pop-up Card is unique because it has the second arch cut in half with half the butterfly cut out. This provides a center flying butterfly pop-up. The two slots are slid together to form the arch.

**Step 2** – The two V-folds slide together forming a diamond shape opening.

**Step 3** – Two front legs are slid into the smaller Arch.

**Step 4** – Either glue the back tab into position on the base or slide into the base slot and glue from behind.

**Step 5** – Either glue the front tab into position on the base or slide into the base slot and glue from behind.

Gluing the tabs on top makes the front cover have an open design.

**Step 6** – There are two ways to attach the pop-up to the cover. You may use corner cuts when provided or edge adhesive. When using adhesive you may wish to split the inside base or cover so it will open and close nicely.
