

## Penny Spinner Candy Box Template

This template is a CU4CU resource which means you can use the template to make Penny Spinner Candy Box designs for card making. Your design files can include the cutting files. Those purchasing your designs may make your design as Personal Use (PU) or Commercial Use (CU) to resale the physical product. You cannot sell as CU4CU. This is an exclusive design template copyrighted by Judith Henry Designs.

Please give Judith Henry Designs attribution credit in your listing.

## Assembly Instructions

Note the color of the score line (red-valley, blue-mountain). I use a scoring board to trace each score line. Make sure you use a bone folder to make crisp folds.

Cut out each piece in the template from card stock. There are different colors for cutting and score lines. Score lines **can be kiss cut** at a low blade setting.

Start gluing the box together with the edge tabs. Do not glue the top down yet.

The foam template is cut from craft foam with one side adhesive. My example uses two 1/8 inch deep craft to make a 1/4 inch deep piece. Glue those together. The Foam pieces need to be placed inside the box centering the curved opening. The foam piece is slightly smaller than the box for easy fitting.

Now assemble the penny slider. Use foam adhesive circles. The smaller circle will be the mechanisms axel, one penny on each side.

Put the foam adhesive circle on one penny. Insert the penny with foam adhesive circle inside the box with the foam adhesive circle to the outside. Attach the second penny to the small foam circle. The inside penny floats in the foam slot.

Put a larger adhesive foam on the penny on the outside and attach your spinner design. Now finish gluing the box together.

The second box piece (green) will create a separator for the candy area from the spinner mechanism. Add glue to the foam piece and glue the second box piece to it with the edge folds towards you. Once the glue sets, glue each edge fold to the box. This seals the mechanism and separates the two chambers.

Be sure you add your candy before gluing the box closed.

The box is complete and the foam circle should slide through and spin in the slot. When decorating and choosing your cardstock. Remember the green insert box will show through the slot. Use the same pattern as the outer box.

Thank you for your purchase.
