

Easel Card Tutorial by SuzieQ Kuttables

Put 3D foam tape on just the bottom portion of the building, keeping the top portion to move freely. Line up the top of the building to the top of the folded card, which leaves a space on the bottom. This allows the building and table to not be covered when the card is displayed. Do the same for the table. See below how this allows the building and table to be on top of the bumper for display.

Use 3D foam tape on the bumper to lift it up so the card can be displayed as an easel card.

Attach the Display Stamp on the inside to assist the recipient to understand how to display the card.
