

Sleigh Shape Card

Use the photo to identify where the pieces are placed onto the card base. The pieces are all grouped together by color hues. For example: the blue ribbon goes onto the blue package. You chose what color scheme you want. You can also use mini prints for the package paper. In Silhouette studio use the pattern library to fill the cutting piece and the eye dropper to fill the ribbon with similar color. Then printNcut. Or select designer paper and matching cardstock to cut each out. This is your preference but I like to cut as many pieces from cardstock to give the project richer colors. The dimension of cardstock also gives better dimension to the project. I've used silver paper for the sled's blade to add a special twinkle to the card. Consider adding some bling to the tree. Or would Santa deliver it all decked out?

The inside piece is for adding a sentiment. See the gallery pictures for ideas and placement.
